

Preoperative Diagnostics

Full labwork (CBC, chemistry panel, and urinalysis) for all patients prior to general anesthesia is appreciated.

MVS requires the following diagnostics within one month of any anesthesia.

Elective procedures in patients without clinical signs

<2 years of age: PCV/TS, chemistry panel, urine specific gravity

2 to 10 years: CBC, chemistry panel, urine specific gravity

10+ years: CBC, chemistry panel, urinalysis, thoracic radiographs (3 view)

Heart murmur: thoracic radiographs (right lateral and VD views) or prior evaluation by a cardiologist

Previous azotemia: PCV/TS, chemistry panel, urinalysis within 48 hours

Suspected neoplasia: thoracic radiographs (3 view)

Additional diagnostics may be recommended or required for individual patients.
